Volume XX Issue VIII

“Put out” by the Camas Valley Fire Department Auxiliary

September 2020

Back to school!

Since March 13 when on-site learning was shut down, many young people and parents have wanted to hear those words. It has been a long time since the hallways were full of students and that special sound that goes with kids. It has been a joy to see young people down on the football field, or seeing kids enjoy summer school programs. On September 8th, we will be back to those distinctive sounds that only kids can make in a school building.

Between now and then, things need to go our way. Cases of Covid-19 in Douglas County need to stay below 30 cases per 100,000, and we can't have any cases with our students or staff. If one of those happens after we start or are preparing to start, we would have to shut down that cohort for 14 days or delay starting. The good news is that we are moving in the right direction.

OSAA moved fall sports to spring but left fall open for school districts to have practices, scrimmages, or workouts to keep young people active as long as we follow state guidelines. We are looking at a few things and will update everyone as we move closer to the fall.

None of this would have been possible without all the hard work from the contractors working on the schools' seismic grant projects. All of the projects are tracking on time and should be done before school starts.

I know life has been a lot different for us for the past six months, but getting back to school is a step to getting back to normal!

With care,
Mr. Wonsley

Remember to mow around your mailbox and up your driveway so the mail carriers and delivery vehicles will not hesitate to deliver due to fire danger.

We appreciate your support!

TETANUS: IMPORTANT INFORMATION

Tetanus is an often fatal disease that is caused by the bacterium *Clostridium tetani*, which usually enters the body through a puncture, a cut, or an open wound. Tetanus leads to profound painful spasms of muscles, including locking of the jaw so that the mouth cannot open, hence the common name of lockjaw.

The *Clostridium tetani* bacteria releases a toxin that affects the motor nerves, which stimulate the muscles. Prevention involves immediately cleaning and covering any open wound and getting a tetanus vaccination. Regular boosters are necessary to ensure immunity. Unvaccinated people who get puncture wounds or cuts should get tetanus immunoglobulin and a series of tetanus shots immediately; those who have been immunized but are unsure of the date of their last tetanus shot should get boosters.
